## High Pressure Manifolds

Interventional Cardiology & Radiology procedures require flow control devices which are tailored according to the exact needs of the interventionist. As the world leader in OEM Stopcocks, **Elcam's High Pressure Manifolds** provide you with precisely this. Our High Pressure Manifolds are used in cardiac angiography and angioplasty procedures in which fluids are administered under pressure.

Elcam's High Pressure Manifolds were designed to withstand 800 psi pressure and include our uniquely designed ergonomic handles that improve ease of use and convenience.

Available configurations are with 2 or 3 gangs, OFF or ON handles, Right (FM) or Left (MF) and HP rotators.

## Advantages

- Pressure: 800 PSI, holding higher pressure than most competitors
- Innovative ergonomic handles - smooth turning torque design improves ease of use and convenience.
- Elevated handle design enables turning of the handles without touching the ports
- High profile design for easy cleaning and disinfecting
- Transparent housing for visual control
- Highly Customizable- 2 or 3 gangs, OFF or ON handles, Right or Left orientation, 3 or 4 Way handles, different handle colors including color coded handles, HP rotator, and customer logo engraving
- Elcam operates in strict compliance with international quality standards. Our manifolds are manufactured in fully automated processes ensuring consistent production of high quality products
- Competitive price
